EDUCATION

Georgia Institute of Technology

August 2024 - Present

Master of Science in Computer Science, 4.0 Grade Point Average

Specialization: Artificial Intelligence

Relevant Coursework: Natural Language Processing, Knowledge-based Artificial Intelligence, Research Operations Project Management, Introduction to Health Informatics, Machine Learning for Trading, Data and Visual Analytics, Software Development Processes

University of Washington

Seattle, WA

Bachelor of Science in Bioengineering, 3.78 Grade Point Average

Completed June 2023

Relevant Coursework: Machine Learning, Database Systems, Real-Time Biosignal Processing, Medical Imaging, Bioengineering Systems and Control

Honors: University of Washington Dean's List for 11 Quarters (2019-2020, 2020-2021, 2021-2022, and 2022-2023)

SKILLS

- **AI & Data Tools:** Claude (API & Claude Code), ChatGPT, Gemini, Microsoft Copilot Studio, LLM prompt engineering, AI workflow automation, Power BI, Tableau, Streamlit, Azure
- **Programming & Data:** Python (Pandas, NumPy, scikit-learn, PyTorch), Java, React, SQL, R, MATLAB; Git, Docker, PostgreSQL, SQLite
- **Microsoft Office Suite:** Excel, Word, PowerPoint, Outlook; SharePoint (working knowledge)
- **Project Coordination:** Jira (task tracking), Slack (team communication), Git (version control), project road mapping, milestone tracking, stakeholder reporting, cross-functional collaboration
- **Languages:** English (native), Mandarin, Hindi, Punjabi

WORK EXPERIENCE

AI for Mental Health Sensing

University of Washington (Advisor: Prof. Anind Dey, Dean of iSchool)

Project Manager

January 2026 – Present

- Manage end-to-end coordination of a 5-researcher interdisciplinary team using Jira for task tracking, Slack for async team communication, and Git for version-controlled code and documentation, ensuring all workstreams stay on schedule
- Built LabBot, a **Claude-powered AI assistant** that **automates** high-frequency, repeatable report summarization for student researchers, reducing manual summarization time and improving consistency and quality of stakeholder updates

Stryker

Redmond, WA

Software Engineering Intern - AI

May – August 2025

- Collaborated with software, hardware, and quality assurance teams to identify workflow bottlenecks in a regulated medical-device environment; coordinated across these groups to design and implement **AI-driven process improvements** that cut test-creation time by 75%, driving measurable efficiency gains across the team
- Produced workflow documentation of existing verification processes, developed **reusable prompt templates to standardize AI interactions**, and rolled out **Copilot Studio-based automation** to improve QA team efficiency
- Designed and delivered an AI enablement workshop for cross-functional teams — training engineers, QA analysts, and clinical staff on practical **AI usage and prompt engineering techniques** for their workflows
- Designed Python data pipelines to clean, structure, and document ECG datasets for machine-learning model development supporting cardiac outcome detection (ROSC)

PROJECTS

Cross-media Sentiment Aware Recommender System

August – December 2025

- Built a sentiment-aware cross-media recommendation system that uses **Python, embeddings, and ChromaDB** to generate personalized book, movie, and music recommendations, transforming unstructured input into structured insights
- Implemented semantic search, similarity algorithms, and interactive **Streamlit** visualizations, and conducted evaluation experiments with statistical scoring to measure model relevance and usability

AI-driven Trading System

January – May 2025

- Implemented algorithmic trading system in **Python using Pandas, NumPy, and SciPy**, integrating market simulation, technical indicators, and Q-learning/decision tree strategies; tracked development in GitHub and PyCharm
- Developed and visualized model performance with **Matplotlib**, creating stock price, indicator, and portfolio value plots to evaluate and optimize ML-based trading strategies

Pediatric Endotracheal Tube Fixation Device – Seattle Children's Hospital

January – June 2023

- Led a 4-person bioengineering team through full product development cycle, coordinating stakeholder interviews with nurses and patients at Seattle Children's Hospital, conducting market research, and synthesizing findings into formal usability requirements
- Managed team deliverables and timelines, presented progress to faculty advisors, and delivered a novel nasotracheal fixation device for pediatric patients that reduced spontaneous extubation risk while minimizing provider intervention
